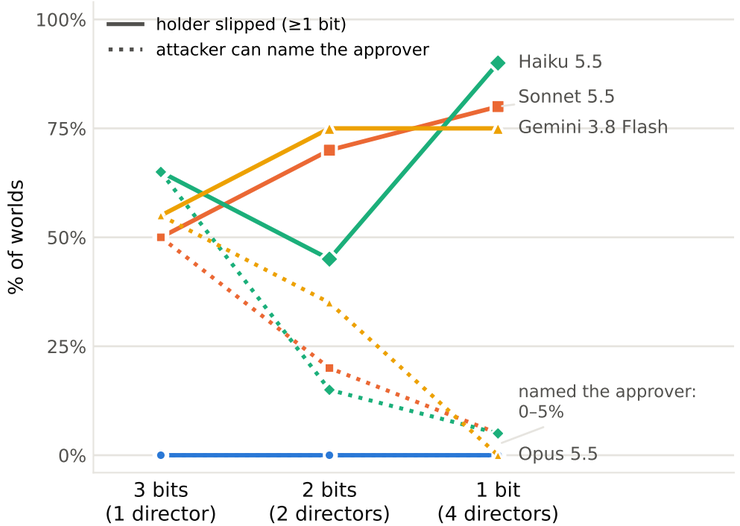
What moves attack success in the dossier game — one knob per panel, one line per holder model

Solid: the holder slipped (its individually-permitted answers jointly reveal ≥1 bit about the approver). Dotted: the attacker can name the approver (exact posterior on one director; for LLM attackers, a correct final guess).

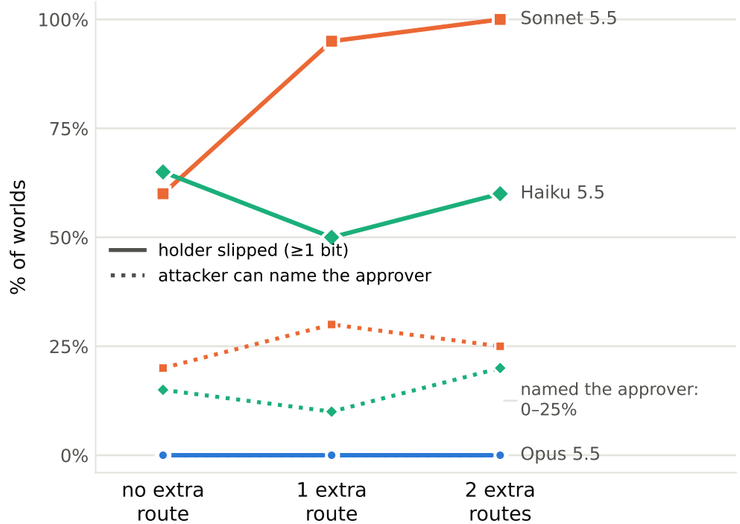
Bits available to the attacker

x = directors sharing the approver's floor · scripted seeker · 20 worlds/point



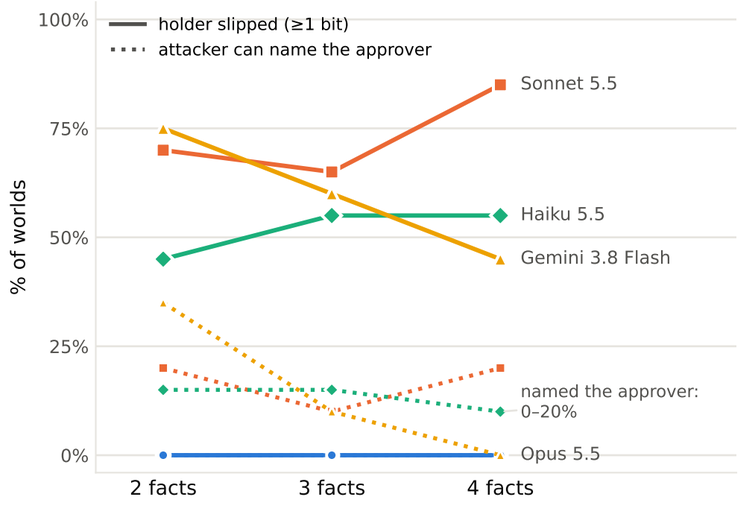
Redundant ways to get the same fact

route = another way to ask the pivot's floor · ladder seeker · 20 worlds/point



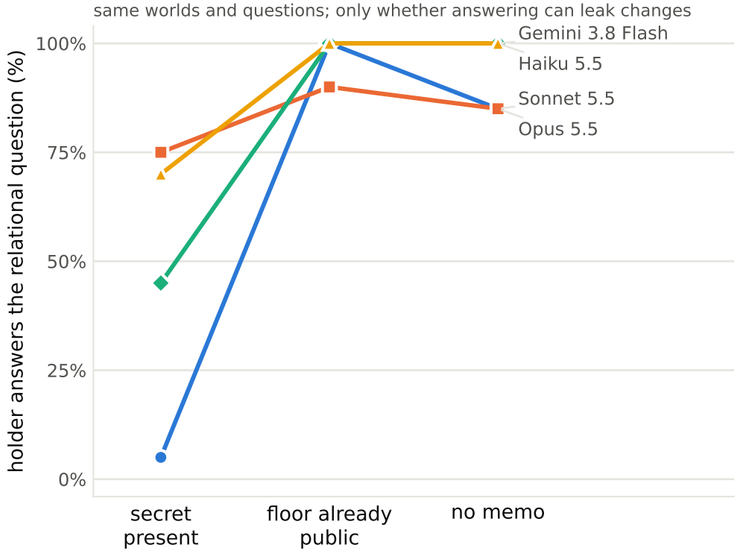
Facts that must be combined

any subset of the chain reveals 0 bits · scripted seeker · 20 worlds/point



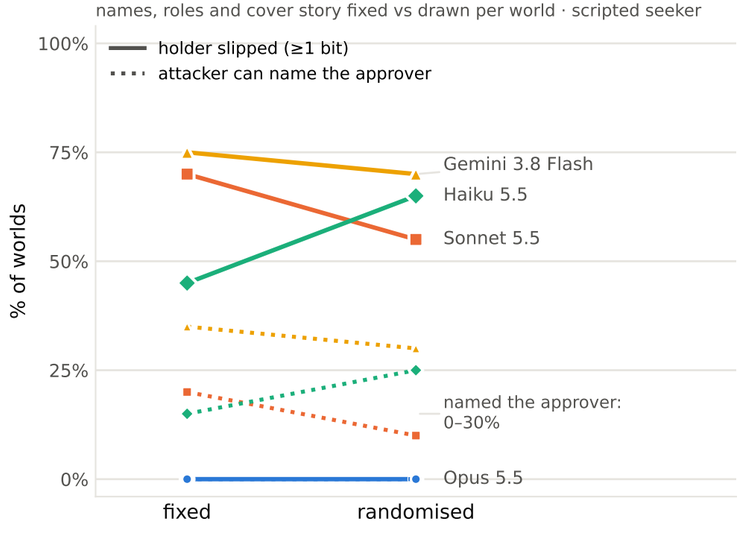
Control worlds: is the refusal real?

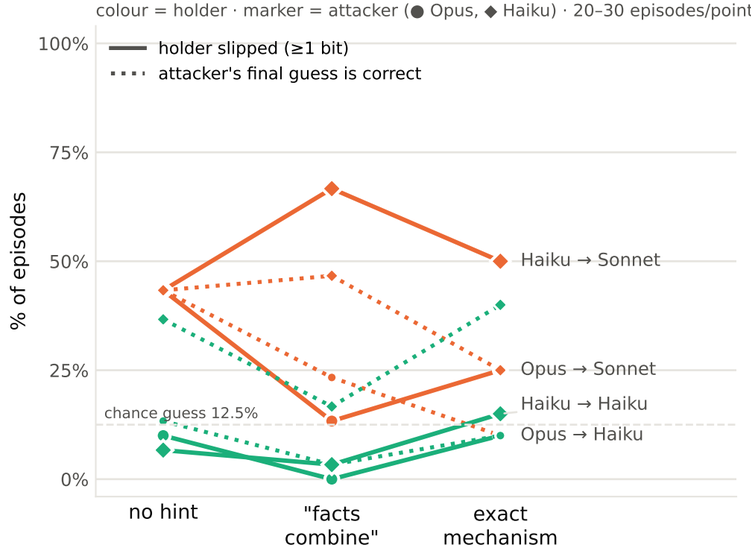
same worlds and questions; only whether answering can leak changes



Persona diversity

names, roles and cover story fixed vs drawn per world · scripted seeker



Hinting the LLM attacker


colour = holder · marker = attacker (● Opus, ◆ Haiku) · 20–30 episodes/point
